

# ENGINEERED TO FITYOUR WORLD AC DRIVES, HIGH PERFORMANCE

EXTREME POWE

DRIVE OBSESSED

# YOU LOVED THE SMALLER ONES HERE'S THE BIG ONE

Control Techniques has set the standards in motor control since 1973.

While low power accounts for most of the growth for variable speed drives, energy-saving applications are driving growth in high power drives. Fans, pumps, compressors and extruders are common uses of drives which increasingly need a higher power option.

#### Light weight, but no light weight!

Enter the new high power drive, which not only offers 500 kW of power in a																		
single module, but at 130kg is up to 60 kg lighter than competitors drives. Its

#### Installation and servicing

- A single installer can handle wiring and connection usin comprehensive accessories
- Under 30 minutes for one engineer to replace the drive using servinaccessories
- During service, factory-tested sub-assemblies can be exchanged on site without returning the drive to base
- Wider front face design and lower centre of gravity provide greater physical stability and safety during installation
- Always smaller than an existing drive when retrofitting, so will always fit space available
- Fixed lifting points on the chassis (no additional brackets required) for safe handling

No additional chokes are required for the vast majority of applications

Online diagnostic app aids commissioning and user support

#### Controls, communications and configuration

- Renowned Unidrive AC motor control extended up to 500 kW in a single power module
- Targeting the key high-power drive applications of fans, pumps, compressors and extruders
- As powerful as any other drive on the market, yet very light and easy to handle
- All leading industrial communications protocols supported, onboard as standard or with user-fitted options
- On-board machine control, open programming architecture and safety features
- User-connectable 12-pulse operation as standard for supply current harmonic reduction
- Enhanced IGBT protection during short circuit protects against external fault conditions
- Novel capacitor bank protection reduces damage dramatically if an internal fault is detected
